MEASURE SUMMARY

Lighting Controls	Motors and Drives
Daylight Controls	VFD for Fan or Pump Motor
Occupancy Controls	Premium Efficient Motor – ODP
Bi-Level Control	Premium Efficient Motor – TEFC
Onsite Generation	Notched or Synchronous Belt Retrofits
Combined Heat & Power	Compressed Air
Waste Heat Recovery (Organic Rankine Cycle)	VSD Air Compressor
Geothermal	Zero Loss Drain
Ground Source Heat Pump	Nozzles
HVAC	Compressed Air Storage
Boilers	Cycling or Thermal Mass Refrigerated Dryer
Condensing Unit Heaters	Desiccant Dryer Dewpoint Demand Controls
Boiler and Heater Controls	Low Pressure Drop Filter
High Efficiency Furnaces	Refrigeration
Chillers	Anti-Sweat Heater Controls
Roof-Top Units and Roof-Top Unit Controls	Automatic Door Closer
Condensing Make-Up Air Unit	Evaporator Fan Control
Heat and Energy Recovery Ventilators	Night Covers
Demand Control Ventilation	Strip Curtain
Destratification Fans	Lighting Systems
HVAC Pipe Insulation	Downlight Fixtures and Retrofit Kits
Packaged Terminal Heat Pumps	LED Exit Signs
Process Heating	Troffer Fixtures and Kits
Steam Traps	Refrigerated Case Lighting LED
Economizers	Exterior LED Fixtures
Steam Fittings and Pipe Insulation	Accent or Track Lighting
Water Heating	Linear LED Fixture Replacement or Retrofit
Condensing Storage Tank Water Heater	Bay LED Fixture
Condensing Tankless Water Heater	Building Envelope and Windows
Water Heater Jacket	Air Curtains and Door Dock Seals
Food Service	Ceiling and Wall Insulation
Ovens	High Efficiency Windows
Fryers	Agricultural Lighting
Griddles	Greenhouse Top Lighting
Steam Cookers	Solar Air Heating
Dishwashers	Solar Pre-Heating of Intake Air
Demand Control Kitchen Ventilation	

ABOUT THE PROGRAM

Emissions Reduction Alberta's (ERA) Energy Savings for Business (ESB) Program is a funding opportunity support small- and medium-scale industrial and commercial businesses with a budget of up to \$55 million to support cost-saving and emissions reducing projects. The Program will help Alberta businesses reduce emissions, decrease operating costs, grow their operations and become more competitive, while creating skilled jobs and boosting economic recovery.

A wide range of incentives are available to help Alberta businesses reduce the initial cost of installing high efficiency equipment and emissions reduction technologies. This document represents the detailed list of emission reducing technologies, or "Measures", that qualify for participant incentives. Incentives are available for equipment upgrades and installations that include:

- Motors & Drives (Updated May 25, 2021)
- Compressed Air (Updated May 25, 2021)
- Refrigeration
- Lighting Systems (Updated May 25, 2021)
- Lighting Controls (Updated May 25, 2021)
- Onsite Generation (Updated May 25, 2021)
- Geothermal (Updated May 25, 2021)
- HVAC (Updated March 30, 2021)
- Process Heating (Updated March 30, 2021)
- Water Heating (Added February 24, 2021)
- Building Envelope and Windows (Updated March 30, 2021)
- Food Service Equipment (Updated May 25, 2021)
- Solar Air Heating (Updated May 25, 2021)
- Agricultural Lighting (Updated May 25, 2021)

Incentives for the Eligible Measures listed in this document are based either on size, quantity, capacity, or a metric of energy savings. Eligible Measures are subject to specifications provided for each Measure within this document.

To register for the program as an applicant or contractor, please visit the ESB Program webpage. After you are successfully registered, you can begin applying for incentives. The ESB Application Process page on the website has more details.

For a detailed description of eligibility rules for applying for incentives under the Program, applicants are encouraged to read the Participant Terms and Conditions.

INCENTIVE CALCULATIONS

The incentive is calculated based on the lesser of the Measures List fixed value per unit and the stated incentive cap based on eligible expenses. The fixed value per unit is indicated here with the red squares in the screenshot below. The second column shows the cap on Maximum % of Eligible Expenses. This percentage sets the cap on incentives based on the total eligible expenses (what is called Project Costs in the application).

Measure Code	Measure and Minimum Eligibility	Incentive Value	Maximum % of Eligible Expense
	y Drive (VFD) on which VFD is installed is between 1 to 500 hp on sheet to be provided		
		Incentive	e value per hp
ESB-MDZVFD-0001 to 0006	VFDIncentive is capped at \$12,500	\$125	50%

In this case, for the VFD, the incentive is \$125/hp.

For example, if you are installing a VFD on a 20 HP motor, the fixed incentive amount from the Measures List would be \$2,500. This calculation is based on \$125/HP * 20 HP = \$2,500

During the application, the project costs are requested, with three different components:

- 1. Equipment and Materials
- 2. Labour
- 3. Design and Other.

For details on the eligible expenses that align with these costs, please refer to the Participant Terms and Conditions.

	Fixed incentive amount	Total Costs	Cap on Incentive	Cap Impact on Incentive	Capped Incentive
Scenario A	\$125/HP * 20 HP = \$2,500	\$6,000	\$3,000	Νο	\$2,500
			(50% of \$6,000)	(\$3,000 > \$2,500)	
Scenario B	\$125/HP * 20 HP = \$2,500	\$4,500	\$2,250	Yes	\$2,250
			(50% of \$4,500)	(\$2,250 < \$2,500)	

MOTORS AND DRIVES (Updated May 25, 2021)

ONSITE GENERATION (Updated May 25, 2021)

Measure Code	Measure and Minimum Eligibility	Incentive Value	Maximum % of Eligible Expense	
 Combined Heat Power (CHP) Comply with Micro-generation regulation (Alberta Reg 27/2008). Submission of Form A is required before project pre-approval. For new systems, the interconnection approval is received within one year of the Application Date. Eligible prime movers include internal combustion engines or turbine driven. Must be connected to the electricity grid All heat must be used within the Eligible Facility. Minimum overall system efficiency is 50%. Minimum system utilization factor is 75% or 85% (depending on measure selected). System design must be approved by an engineer licensed in Alberta. CHP System can be a retrofit within an existing Facility or within a new construction project. Comply with the "Additional Eligibility Requirements for CHP Systems" within the Participant Terms and Conditions. For incentive determination, the generator nameplate electrical output will be used. Not eligible: Fuel cells 				
0	Vicroturbines	Incentive	value per kW	
ESB-OGZCHP- 0001	 Combined heat & power systems 150 kW to 4MWe System efficiency 50% to less than 60% System utilization factor must be 75% or greater 	\$400	50%	
ESB-OGZCHP- 0002	 Combined heat & power systems 150 kW to 4MWe System efficiency 60% or more System utilization factor must be 85% or greater 	\$500	50%	
ESB-OGZCHP- 0003	 Combined heat & power systems smaller than 150 kW System efficiency 50% to less than 60% System utilization factor must be 75% or greater 	\$750	50%	
ESB-OGZCHP- 0004	 Combined heat & power systems smaller than 150 kW System efficiency 60% or more System utilization factor must be 85% or greater 	\$850	50%
